INTRODUCTION

The department began offering degrees in computer science in 1983. Currently the department has nine full-time faculty members and a number of part-time instructors. It offers a full range of courses in computer science and information technology. Today we have over 240 declared majors in computer science. We offer a Bachelor of Science degree, an Associate of Science degree, three certificate programs, a minor in computer science, a minor in cognitive science, and a minor in informatics. In addition, our department offers a Master of Science degree in Applied Mathematics and Computer Science jointly with the Department of Mathematical Sciences. We also provide key computing courses for the Master of Science degree in Management of Information Technology (MS-MIT), offered by the School of Business and Economics.

EQUAL OPPORTUNITY

The department recruits majors without regard to race, sex, religion, nationality, or physical disability, and seeks to provide every student equal access to all its facilities and degree programs. Indeed, we welcome diversity among our students as a positive factor in learning.

MESSAGE FROM THE FACULTY

Our mission is to provide the highest quality education in the most enjoyable and friendly atmosphere possible. In pursuing this mission we work hard to attract the most highly qualified faculty to our program. Our faculty play an essential role in our ability to develop and maintain a high quality computer science program at IUSB. Accordingly, we seek to attract faculty with strong applied research potential, instructional ability and communication skills necessary for the mutual benefit of the university, business, scientific and engineering communities. Our goal is to bridge the gap between theories and concepts presented in the classroom and real life business and industry needs and practices.

We have charted a course to develop many exciting and challenging projects over the next five years. Some of these are given below:

- Develop a masters program in computer science.
- Develop a bachelors program in Informatics.
- Prepare for accreditation of our B.S. in Computer Science by the Computer Science Accreditation Board (CSAB). Accreditation will externally validate the quality that already exists in our programs.
- Continue to refine our joint masters program with the Department of Mathematics Sciences (M.S. in Applied Mathematics and Computer Science).
- Continue to refine our joint masters program with School of Business and Economics (MS-MIT).

In addition to the above, we will continue to

- improve our teaching and research environment for our students and faculty, and aggressively recruit the best and brightest faculty to our department.
- improve our laboratories.
- expand our community outreach program.
- mentor our students, and support their learning, research and creative activities.

If you are considering majoring in computer science, we would be pleased to hear from you. Members of the department are happy to answer questions about our programs at any time. Drop by the department or give us a call at (574) 237-6521. Alternatively, you may browse our department’s web site at http://www.cs.iusb.edu
Hakimzadeh, Hossein, Ph.D. in Computer Science (North Dakota State University, 1993). Research interests: database management systems; operating systems; distributed systems; object-oriented software engineering.

Matthew D. Holloway, M.S. in Systems Engineering (Oakland University, 1989), BS degree in Electrical Engineering (University of Notre Dame, 1987). Visiting Lecturer in Informatics.

Russo, John, Ph.D. in Mathematics (Florida State University, 1965). Research interests: program efficiency; software engineering.

Scheessele, Mike, Ph.D. in Quantitative and Mathematical Psychology (Purdue University). Research interests: Cognitive science and artificial intelligence, especially psychologically plausible artificial vision and problem-solving systems. Additional interests include software engineering, information systems, and information assurance and security issues.

Schwartz, Ruth, Ph.D. in Business Administration with a double major in Computer Information Systems and Operations Research (Temple University), M.S. degree in Computer Science (University of California, Los Angeles), BA degree in Liberal Arts with a major in mathematics (Northwestern University). Teaching and research interests: Curriculum development, database systems, enterprise resource planning, and programming languages.

Surma, Dave, Ph.D. in Computer Science and Engineering (University of Notre Dame 1998). Research interests: Parallel and Distributed Computing, Multimedia applications, Computer Architectures, High-Performance Networks, and Software tools for parallel and distributed computing systems.

Vrajitoru, Dana, D.Sci. in Computer Science (University of Neuchâtel, 1997). Research interests: genetic algorithms; scientific visualization; parallel computation; information retrieval; artificial intelligence.

Wolfer, James, Ph.D. in Computer Science (Illinois Institute of Technology, 1993). Research interests: harnessing the power of naturally inspired computation to solve real-world problems, visualization in science and medicine, cognitive science and computer science education.

COMPUTER SCIENCE PROGRAMS

Currently, IUSB offers a Master of Science degree, a Bachelor of Science degree and a two-year Associate of Science degree in computer science. Students majoring in computer science at IUSB will take a course of study modeled after the recommendations of the Association for Computing Machinery. C++ is the principal programming language at IUSB, but Scheme, Java, Visual BASIC, and other languages are offered.

All computer science majors must complete a core curriculum of courses that build an overall understanding of the computer, computing environments, and theoretical and ethical issues important in the computer related professions.

Computer Science students work in a variety of computing environments at IUSB. In the first two programming courses (C101 and C201) students work on Windows based microcomputers. Many subsequent courses involve working in a UNIX environment available in departmental laboratories. The departmental UNIX machines are also available over phone lines for students who wish to have remote access. The IUSB campus is an Internet site, so students have access to electronic mail and the World Wide Web.
BACHELOR OF SCIENCE IN COMPUTER SCIENCE

The degree requires a total of 122 credit hours including the following:

<table>
<thead>
<tr>
<th>Area 1 (English Composition)</th>
<th>W131, or equivalent.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Area 2 (Foreign Language)</td>
<td>Six credit hours in a single foreign language, or equivalent (e.g., 3 years of a single foreign language in high school with at least a C average).</td>
</tr>
<tr>
<td>Area 3 (Business / Foreign Language)</td>
<td>Completion of one of the following three options: a) Five courses in Business and Economics, including Accounting A201, A202, and courses from at least two other departments in Business and Economics. K201 and E270 are excluded from the list of five courses. Economics courses fulfill this requirement and requirement 5a below simultaneously. Students who complete ECON E103, ECON E104, BUS A201, and BUS A202 may wish to consider BUS F301 Financial Management as a fifth course in this area. b) Six credit hours at the second year level in a foreign language. c) Six credit hours at the first year level in a second foreign language.</td>
</tr>
<tr>
<td>Area 4 (Arts and Humanities)</td>
<td>One course from each of the following three areas, plus a fourth course in any one area. a) Fine Arts; Music M174; Communication Arts (except S160). b) English (except W130, and W131); Foreign Languages (only advanced courses of a literary nature). c) History, Philosophy, Religious Studies.</td>
</tr>
<tr>
<td>Area 5 (Social and Behavioral Sciences)</td>
<td>Four courses from the following areas, to include at most two in any one area. a) Economics; Geography; Political Science. b) Psychology. c) Sociology/Anthropology; Linguistics.</td>
</tr>
<tr>
<td>Area 6 (Natural Sciences)</td>
<td>Thirteen credit hours in courses selected from chemistry, physics, geology, biology, and astronomy. At least two disciplines must be selected. At least one of the courses must have a laboratory component. Physics P303 is required.</td>
</tr>
<tr>
<td>Area 7 (Mathematics)</td>
<td>Thirteen credits to include: a) at least 6 credits of calculus: M208 and M209, or M215 and M216. b) 3 credit of linear algebra: M301. c) at least 4 credits of probability and statistics: M260 Combinatorial Counting &amp; Probability (2cr.) M266 Statistical Inferences (2cr.)</td>
</tr>
<tr>
<td>Area 8 (Computing)</td>
<td>Forty-four credit hours in computer science, to be satisfied with the following courses: Core: C101, C151, C201, C243, C251, C308, C311, C335, C435, C455, and Electives: at least three additional computer science courses at or above the 300 level offered by the department. Possible choices for these three courses include the internship course (Y398), computer hardware and digital design (C421), parallel and distributed programming (B424), compiler design (C431), information organization and retrieval (C441), database systems (C442), artificial intelligence (C463), computer networks (B438), graphics (C481), advanced PC techniques (C490), and object oriented programming in Java (C490). Numerical analysis (M471) may be counted as an elective in computer science.</td>
</tr>
</tbody>
</table>

NOTE: At least 22 of the 44 credit hours must be taken at IUSB.

### ASSOCIATE OF SCIENCE IN COMPUTER SCIENCE

This degree requires a total of **61** credit hours. These are broken into Concentration Requirements and General Requirements.

**Concentration Requirements:** C101, C151, C201, C243, and at least three more courses in computer science offered by the department above the level of C201. (The word "course" here means at least 3 credit hours) A minimum of 21 credit hours total are required. At least 12 of these credits must be taken at IUSB.

**Basic requirements:** English Composition W131 or equivalent (3 credit hours); arts and humanities (6 credit hours); social and behavioral sciences (6 credit hours); natural sciences (8 credit hours); foreign language (6 credit hours); and Mathematics M208 (3 credit hours) or M215 (5 credit hours).

CERTIFICATES IN PROGRAMMING

The department offers two separate undergraduate level certificate programs: a Certificate in Computer Programming and a Certificate in Advanced Computer Programming. These certificates are intended primarily for students who are seeking or already hold a degree in some other subject but who wish to acquire some of the skills practiced by well-trained professional programmers.

<table>
<thead>
<tr>
<th>Certificate in Computer Programming</th>
<th>Certificate in Advanced Computer Programming</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>C201  Computer Programming II</td>
<td>C308  System Analysis and Design</td>
</tr>
<tr>
<td>C311  Org. of Prog. Languages</td>
<td>C311  Org. of Prog. Languages</td>
</tr>
<tr>
<td>C335  Computer Structures</td>
<td>C335  Computer Structures</td>
</tr>
<tr>
<td>One additional computer science course at or above the 300-level.</td>
<td>One additional computer science course at or above the 300-level.</td>
</tr>
</tbody>
</table>

In addition, the student must take and pass ENG W130 Principles of Composition with a grade of C or better, or else must score at a level that would permit them to take ENG W131 Elementary Composition on the IUSB placement examination in composition.

A student who has earned the Certificate in Computer Programming may afterwards take the remaining courses required to earn the Certificate in Advanced Computer Programming.

NOTE:

** The College of Liberal Arts and Sciences does not allow a student to obtain a certificate and an A.S. or B.S. degree in computer science in the same semester.

CERTIFICATES IN TECHNOLOGY FOR ADMINISTRATION

The department offers a graduate level Certificate in Technology for Administration. The goal of this certificate is to provide the necessary technical expertise to those who are already in technology management positions but feel a gap in their knowledge or those who are considering such positions in the future and need solid technical/computer expertise. Candidates for this certificate program must have a bachelors degree prior to enrolling in the program.

<table>
<thead>
<tr>
<th>Certificate in Technology For Administration</th>
</tr>
</thead>
<tbody>
<tr>
<td>This certificate requires completion of the following 4 courses at IUSB.</td>
</tr>
<tr>
<td>CSCI A505 - Object Oriented Programming (4 cr.)</td>
</tr>
<tr>
<td>BUSB K506 - Web Site Development Techniques (3 cr.)</td>
</tr>
<tr>
<td>CSCI A510 - Database Systems (3 cr.)</td>
</tr>
<tr>
<td>CSCI A515 - Telecommunications and Computer Networks (4 cr.)</td>
</tr>
</tbody>
</table>

Depending on prior academic experience, a student may be exempted from one of the above courses. In such cases, the student must consult the department chair to make an appropriate substitution.

In addition, the student may be required to take additional courses to satisfy possible deficiencies. Prospective students are encouraged to consult with the chair of the department for additional information.
MINOR IN COMPUTER SCIENCE

This requires a minimum of 21 credit hours of computer science consisting of six courses, to include C101, C151, C201, C243, and two more courses in computer science offered by the department, above the level of C201.

MINOR IN COGNITIVE SCIENCE

This consists of at least 15 credit hours of courses chosen from the following:

<table>
<thead>
<tr>
<th>Computer Science:</th>
<th>C101, C201, C243, C251, C463</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mathematics:</td>
<td>M343, M344, M360, M366, M447</td>
</tr>
<tr>
<td>Philosophy:</td>
<td>X100*, X200, X220*, P250, P312, P313, P320, P360, P366, P383*</td>
</tr>
<tr>
<td>Psychology:</td>
<td>P325, P326, P329, P335, P390*, P423, P438, P459, P495*</td>
</tr>
<tr>
<td>Cognitive Science:</td>
<td>P200(Phil), P383 (Phil), P390(Psy)</td>
</tr>
</tbody>
</table>

In addition, the following conditions must be met:

1. One of the Cognitive Science courses must be included in the program.
2. At least 3 credit hours from each of the areas of computer science, philosophy, and psychology must be included in the program. Students majoring in computer science must take an additional course in one of the other areas (none of the courses listed in Computer Science can count toward both a major and a minor).

A minor program in Cognitive Science requires approval by the Cognitive Science Committee. In particular, courses marked with an asterisk in the above list have greatly varying content, so their acceptability in a minor program will be determined by the committee. Credit cannot be earned for both C297 and C463 when the former is offered under the title "Introduction to Artificial Intelligence". Also, credit cannot be earned for both X355 and X410. Courses not listed above may be included with permission of the committee. Such courses are not restricted to the areas of computer science, psychology, and philosophy; they may also be appropriate courses from anthropology, linguistics, or neuroscience.

Consult the cognitive science web site for additional details: http://www.iusb.edu/~cogsci/minor.html

The Cognitive Science courses may be used in the cognitive science minor when offered with the subtitle "Introduction to Cognitive Science". When so offered, the course content will be interdisciplinary, drawing from some or all of these areas: philosophy, psychology, computer science, linguistics, neuroscience, anthropology, and/or mathematics. The primary goal of the course is to survey cognitive science as a whole and to demonstrate both its unity and its eclectic nature. A seminar format will be used.
MINOR IN INFORMATICS

The objective of this program is to address the needs of those students seeking a broad understanding of information technology, its social and psychological dimensions, and its application to specific disciplines. The minor in Informatics will prepare students with tools to become skilled professionals. Students in this program are expected to acquire applied technical and analytical skills that can be applied to other disciplines, such as biology, chemistry, psychology, cognitive science, physics, library sciences and decision sciences.

The minor in Informatics requires students to take three lower level Informatics courses and two upper level Informatics or upper level elective courses from the table below.

LOWER LEVEL
INFO I101 Introduction to Informatics (4 cr.)
INFO I202 Social Informatics (3 cr.)
INFO I210 Information Infrastructure I (4 cr.)
INFO I211 Information Infrastructure II (4 cr.)

UPPER LEVEL INFORMATICS COURSES
INFO I300 Human Computer Interaction (3 cr.)
INFO I303 Organization Informatics (3 cr.)
INFO I310 Multimedia Arts and Technology (3 cr.)
INFO I312 Information Representation (3 cr.) (Was I200)
INFO I320 Distributed Systems and Collaborative Computing (3 cr.)
INFO I400 Topics in Informatics (3 cr.)

UPPER LEVEL ELECTIVES
BUS K301 Enterprise Resource Planning (3)
BUS K321 Management Information Systems (3 cr.)
PHYS P281 Solid State Electronics I (3 cr.)
PHYS P302 Digital Electronics (4 cr.)
SOC S319 Sociology of Science (3 cr.)
SOC XXX Human Computer Interaction (3 cr.)
SOC S451 Web Based Survey Techniques (3 cr.)
CSCI A340 Introduction to Web Programming (3 cr.)
CSCI C335 Computer Structures (3 cr.)
CSCI B424 Parallel and Distributed Programming (3 cr.)
CSCI C442 Database Systems (3 cr.)
CSCI C463 Artificial Intelligence (3 cr.)
CSCI B481 Interactive Computer Graphics (3 cr.)
CSCI B438 Computer Networks (3 cr.)
PHIL P338 Philosophy of Technology (3 cr.)
PHIL PXXXX Computer Ethics (3 cr.)
MATH M365 Probability and Statistics (3 cr.)
MATH MXXXX Simulation
PSY P335 Cognitive Psychology (3 cr.)
BIOL L311 GENETICS (3 cr.)
BIOL LXXXX Bioinformatics (3 cr.)
CHEM C371 Chemical Informatics I (3 cr.)
ARTS PXXX Advanced Digital Production (3 cr.)
ARTS P274, P374 Computer Arts and Design I and II (3, 3 cr.)
ENGL WXXXX Web-Based Instruction (3 cr.)
ENGL WXXXX Web-Based Writing / Journal Editing (3 cr.)

The courses offered as Informatics electives will vary over time. Many courses at the 300 level or above in computer and information sciences and decision sciences can count as an elective. The student should consult the Informatics program director for details.

A minimum grade of 2.0 (C) is required in all courses taken for the minor.

Consult the Informatics web site for additional details: http://www.informatics.iusb.edu

COMPLEMENTARY MAJOR IN COMPUTER SCIENCE

Students with majors in the Division of Arts may earn a Complementary Major in computer science. Students must complete at least 30 credit hours in computer science, to be satisfied with C101, C151, C201, C243 and other courses above the level of C201 approved by the Department of Computer and Information Sciences.
MASTER OF SCIENCE IN APPLIED MATHEMATICS AND COMPUTER SCIENCE

This graduate degree is offered jointly by the Department of Computer and Information Sciences and the Department of Mathematical Sciences at IUSB. The goal of this program is to address the needs of people who already have work experience in technical or quantitative fields, people with undergraduate degrees in science or business, or people who simply wish to increase their level of skills and expertise in computing and applied mathematics.

Students begin with a flexible core curriculum in both computer science and applied mathematics, then proceed to specialize in their desired fields. We anticipate that students with the proper background can complete the 36 credit program in two years. Students will be able to tailor a program to their needs with the help of an advisor. The emphasis throughout the curriculum will be on the real-world problems and applications likely to be encountered in business and industry.

ADMISSION REQUIREMENT

Candidates for admission to the program are required to hold a baccalaureate degree from an accredited institution with a minimum GPA of 3.0 and promising application materials. An applicant whose past academic record is not sufficiently strong (low GPA, undergraduate degree completed too long ago and work experience not in the field) could qualify for admission by scoring 600 or higher on at least one GRE. Although no specific undergraduate field of study is required, students with satisfactory competence in undergraduate study of basic computer and mathematics subjects will be encouraged to apply. Generally, these will be graduates with undergraduate degrees in mathematics, computer science, chemistry, physics, biological sciences, engineering, secondary mathematics education, business, economics, and other technical fields. Students who do not have appropriate background in computer science and/or in mathematics are also welcome, and they will be allowed to take the necessary pre-requisite course work. In addition to the above, applicants whose native language is not English should submit proof of such proficiency (TOEFL) by the time they apply for admission. A minimum TOEFL score of 550 is required.

DEGREE REQUIREMENT

The program will be tailored to individual student needs, and will consist of 36 credit hours, including 30-33 hours of course work and 3-6 hours of a thesis or graduate project. A student will choose to specialize either in computer science or in applied mathematics. The core courses for each of those disciplines are as follows.

A student is also required to take at least 3 courses in the complementary discipline. A student choosing to specialize in Applied Mathematics will take all four courses listed in the Applied Mathematics core in Table A, and at least three Computer Science courses: B503 (Algorithms Design and Analysis) and 2 or more Computer Science courses from tables B or C. Similarly, a student choosing to specialize in Computer Science will take all four courses listed in the Computer Science core in Table A, and at least three Applied Mathematics courses: M575 (Simulation Modeling) and 2 or more Applied Mathematics courses from tables B or C.

Students from both disciplines will be encouraged to take courses bridging the two disciplines (e.g. M562 - Statistical Design of Experiments and B581 - Advanced Computer Graphics). Students requiring additional background will be allowed to take up to 9 hours of undergraduate 400 level course work, in fulfillment of their credit requirements for the degree. Both full-time and part-time study will be possible.
THESIS

Students will be required to complete a thesis or project. The project should involve a substantial level and amount of work which reflect what a student learned in coursework. The project should have applications to industry or business, and it should have strong academic merit. In preparation for the project, a student should identify to the program’s graduate studies director a project committee. The committee will consist of a faculty member in the student’s discipline to serve as project advisor, a faculty member in the other discipline, and a third person who may be faculty from within or outside of the department, or who may be an appropriate individual in business or industry. The student should submit a project proposal to the committee for approval. The project itself should be reported in a thesis format, and defended before the committee. Copies of the final version of the thesis will be archived in the department and library. Note that there will be no comprehensive exams; in particular, a student finishes the program by finishing a project.

COURSES OFFERED FOR GRADUATE CREDIT

Students must first choose a concentration in either Computer Science or Applied Mathematics. The core courses for each concentration are shown in Table A.

**Computer Science**
- B503 - Algorithms Design and Analysis
- P536 - Advanced Operating Systems
- B538 - Networks and Distributed Computing
- B524 - Parallel and Distributed Programming
- B541 - Hardware System Design I
- B551 - Elements of Artificial Intelligence
- B561 - Advanced Database Concepts
- B565 - Software Engineering I
- B581 - Advanced Computer Graphics
- B582 - Image Synthesis
- B651 - Natural Language Processing
- B661 - Database Theory and Systems Design
- B665 - Software Engineering Management
- Y790 - Graduate Independent Study - Thesis

**Mathematics**
- M546 - Control Theory
- M562 - Statistical Design of Experiments
- M569 - Statistical Decision Theory
- M571-572 - Analysis of Numerical Methods I,II
- M577 - Operations Research
- M5xx - Transform Methods
- M575 - Simulation Modeling
- M576 - Forecasting
- M5xx - Sampling

SAMPLE CURRICULUM FOR MS IN APPLIED MATH AND CS

Although some students will need prerequisite courses, the following two tables represent a typical two year schedule for a student specializing in computer science or mathematics.

For more information about application procedures, course offering, and other requirements please consult the web site: http://www.cs.iusb.edu/applied_mcs.html
MASTER OF SCIENCE IN
MANAGEMENT OF INFORMATION TECHNOLOGIES

This graduate degree is given by the Division of Business and Economics. It requires between 21 and 63 credit hours, depending on the undergraduate background of the student entering the degree program. Highly qualified students may apply for exemption for various courses listed below. For students with no background in business or computer science, the curriculum is as follows:

**Phase 1: Mathematics and Statistics Core (2 courses)**
- Statistical Applications
- Mathematics Tools in Business

**Phase 2: Basic Business Core (9 courses)**
- Survey of Financial Accounting & Reporting
- Management Information Systems
- Survey of Economics
- Organizational Behavior
- Legal/Ethical Environment of Business
- Management of Marketing
- Financial Management
- Production Management
- Managerial Decision-Making Models

**Phase 3: Basic Applied Computing Core (4 courses, to include the first three of the following)**
- Object Oriented Programming
- Database Management Systems
- Telecommunications and Computer Networking
- Web Site Development Techniques
- Enterprise Resource Planning

**Phase 4: Advanced Business Core (4 courses)**
- Management of IT Projects
- Decision Support Systems
- Electronic Commerce
- Business Process Re-engineering Using IT

**Phase 5: Capstone Project Core (2 courses)**
- Seminar in Management of Information Technologies I
- Seminar in Management of Information Technologies II

Admission into the program requires a bachelor's degree from an accredited college or university, a satisfactory score on the GMAT exam, satisfactory undergraduate academic performance, and letters of recommendation. Experience in the workplace is strongly recommended.

Students interested in this degree program should contact the Division of Business and Economics or the IUSB Office of Graduate Programs.
COURSE DESCRIPTIONS

UNDERGRADUATE NON-MAJOR COURSES

A106 Introduction to Computing (3 cr.)
Fundamentals of computer hardware and software; use of packaged programs in areas such as word processing, spreadsheets, database management, communications, graphics; the role and impact of computers in society. Course is designed for people with little or no computer experience. One class per week is spent in the microcomputer teaching laboratory. This course is not intended for computer science majors.

A107 Programming Within Applications (4 cr.)
P: A106 or equivalent. Advanced study and use of the productivity suites (i.e. Word, Excel, Outlook, Access, PowerPoint) an emphasis on programming within applications (i.e. VBA) and database design and development. Basic concepts of programming logic, principles and techniques will be studied. The course will also discuss the Windows operating system as well as the design, construction and publishing of web pages. This course is not intended for computer science majors.

A150 Understanding Operating Systems (1 cr.)
P: A106 or equivalent. Study of the basic concepts of operating systems, understanding the role of operating systems in providing a virtual machine interface. Understanding the relationship between the hardware and operating system. Survey of the user level operating system facilities and commands. This course is not intended for computer science majors.

A201 - Introduction to Programming I (VISUAL BASIC) (4 cr.)
R: M014, A106. Fundamental programming constructs, including loops, arrays, classes, and files. General problem-solving techniques. Emphasis on modular programming, user-interface design, and developing good programming style. Not intended for computer science majors. (Visual Basic or Java). This course is not intended for computer science majors.

A338 Network Technologies and Administration (3 cr.)
UNDER CONSTRUCTION
P: A106, or equivalent computer literacy. Introduction to network principles and current network technology, both hardware and software. Network administration tools and techniques. Laboratory provides practical experience. This course is not intended for computer science majors.

A340 Introduction to Web Programming (3 cr.)
P: A201 or C101. An introduction to programming web documents, including HTML, JavaScript and Perl. Creation of a simple web site, including a home page with dynamic elements, using both client-side and server-side techniques. This course is not intended for computer science majors.
UNDERGRADUATE CS-MAJOR COURSES

C101 Computer Programming I (C++) (4 cr.)
P: M014 or equivalent. Fundamental concepts of algorithm development, modularity and program design, computer programming. The programming language used will be C++. [An exemption exam is available to students who already have some knowledge of C++.]  

C151 Multiuser Operating Systems (2 cr.)
R: C101. Survey of the operating system facilities and commands. Installation and maintenance of operating systems such as Linux. Understanding process management, file systems, memory and virtual memory management issues. Understanding networking and its role in modern computing environment. Operating system security. Writing shell scripts and batch files.  

C201 Computer Programming II (C++) (4 cr.)
P: C101. Fundamental concepts of computer science, including top-down design, data structures, structured control flow, modular programming, recursion and standard algorithms. Programming language concepts are illustrated with C++.  

C243 Introduction to Data Structures (4 cr.)
P: C201, C151. Abstract data types; implementations using various data structures and algorithms; elementary algorithm analysis; space/time trade-offs; sorting and searching; object oriented design and programming; software engineering principles. 

C251 Foundations of Digital Computing (3 cr.)
P: C243; M208 or M215. Mathematical foundations of computing, including mathematical induction, propositional logic, proofs of correctness. Finite graph theory and algorithms. Complexity classes and NP-completeness. 

C297 Sophomore Topics in Computer Science (2-3 crs.)
Contents and prerequisites vary from year to year. (This course may count towards a minor or Associate of Science, but not a bachelor's degree.)  

C308 System Analysis and Design (4 cr.)
P: C243. The software development life cycle structured top-down and bottom-down design; data flow diagraming; entity relationship modeling; study of computer aided software engineering; I/O design and validation; file and database design; design of user interfaces; comparison of structured vs. object oriented design. A team project will be completed.  

C311 Organization of Programming Languages (4 cr.)
(Scheduled to change to 3 credits Fall 2004)
P: C243 and C335. Design and implementation of programming languages: syntax; semantics; comparison of programming paradigms such as imperative, functional, logic, and object oriented. Implementation of concepts such as binding, scope, parameter passing, looping, branching, subprograms, tasks and concurrency, heap management, exception handling, templates, inheritance, overloading.  

C335 Computer Structures (4 cr.)
P: C201. Computer architecture and machine language; internal data representation; assembly systems; program segmentation and linking; I/O devices; serial communication. Projects to illustrate basic machine structure and programming techniques.  

Y398 Internship - Professional Practice (3 cr.)
P: C308, C335, and one additional course in computer science above the level of C243. Enrollment requires that the student be accepted as a temporary employee of an organization or business. The work must offer the student challenging computer experience in a closely supervised position. The student will report weekly to the faculty member in charge. Prior approval of the position is required. The
course can be taken twice for a total of 6 credits, but only 3 credits can be used to satisfy the requirements for computing electives.

**C421 Computer Organization (3 cr.)**
P: Physics P302 or P303, C243, C335. Principles of logic design; addressing; central processing units; microprogrammed versus hardwired control; input-output organization, interrupts; other topics chosen by the instructor.

**B424 Parallel and Distributed Programming (3 cr.)**
P: C243, M301. Overview of parallel computers, shared memory, message passing, MIMD and SIMD classifications. Understanding and use of message passing and synchronization facilities such as MPI. Study of parallel programming models such as master-slave, client-server, task-farming, divide-and-conquer and pipelining. Performance analysis of parallel systems, execution time, time complexity, load balancing and scalability. (Credit not given for both B424 and B524)

**C431 Assemblers and Compilers I (3 cr.)**
P: C311. Analysis and implementation of a compiler for a high level programming language. Relationship between regular languages, finite automata, lexical analysis, and scanner generators such as lex. Relationship between context-free grammars, stack machines, parsers, and parser generators such as yacc and llgen. Symbol tables and semantic analysis for translating declarations, expressions, assignments, I/O, control structures, and subroutines. Large programming project.

**C435 Operating Systems I (4 cr.)**
P: C251, C308, and C335. R: C311. Design and implementation of operating systems: the process model, process synchronization, semaphores, deadlock management, multi-tasking, multi-threading, interprocess communication, process scheduling, memory management, paging, segmentation, virtual memory management, file system design and implementation, I/O device drivers, interrupt handlers and spoolers. Students will complete the design and implementation of a simulated multi-tasking operating system.

**B438 Computer Networks (3 cr.)**
P: C243 and C335. Fundamental concepts and technologies used in design of computer networks. Architecture and design philosophy of Internet and basic performance issues. Low-level technologies like Ethernet and wireless. Packet switching and virtual circuits. Core protocols of the Internet, such as TCP and IP. Error control, congestion control, and routing.

**C441 Information Organization & Retrieval (3 cr.)**
P: C243. Fundamental structures and algorithms for the management of secondary storage devices: persistence; sharability; file and database organization; fields; records; transactions; hardware concepts of storage devices; sequential, random, indexed, hashed, and B-tree files; operations on files; search; sort; performance issues.

**C442 Database Systems (3 cr.)**
P: C308. The fundamental concepts, theory, and practices in the design and implementation of database management systems: data independence; data modeling; entity relationship modeling; functional dependencies; normalization; relational, hierarchical, network, and object oriented data models; relational algebra; relational calculus; data definition and manipulation languages; recovery; concurrency; security; integrity of data.

**C455 Analysis of Algorithms (4 cr.)**
(Scheduled to change to 3 credits as of Spring 2005)
P: C251, M209 or M216. R: M301. Mathematical analysis of time and space requirements for algorithms, using combinatorics, recurrence relations, and elementary probability theory. Turing machines and decidability.

**C463 Artificial Intelligence (3 cr.)**
P: C251. R: C311. Techniques and principles of artificial
intelligence and implementations of some of these techniques. Various formalisms for representing knowledge, and relationships of this to such tasks as inference, game playing, and machine learning.

**C481  Interactive Computer Graphics (3 cr.)**
P: C243, Math M301. An introduction to interactive programming: design and implementation of graphical user interfaces (GUI). Fundamentals of modern interactive graphics: hardware, software, data structures, mathematical manipulation of graphical objects, algorithms for two- and three-dimensional graphics. No prior background in graphics is needed, although a good background in C++ programming and data structures is required. Some familiarity with computer architecture is assumed.

**C490  Seminar in Computer Science (1-3 cr.)**
P: Varies. Special topics in computer science.

---

### MS-MIT COURSES

**A505  Object Oriented Programming (4 cr.)**
Fundamental concepts of software engineering, algorithm development, computer programming, objects, and data structuring. Emphasis on understanding how software is developed, writing small programs and learning to read code with understanding. Will include a weekly closed laboratory session for most of the course.

**BUSB K506  Web Site Development Techniques (3 cr.)**
P: CSCI A505. The course provides students with knowledge and skills in the development of web site to support electronic commerce. The emphasis in the course is on effective design and implementation issues related to web applications for business. Students are expected to become conversant with the tools and techniques used by builders of web-site. Topics include the technology of the Internet, core network protocols, agents, commerce client technology, system design principles among others. (This course is offered by the School of B&E)

**A510  Database Management Systems (3 cr.)**
P: A505. Fundamental concepts and practices in design and implementation of database management systems. Topics include data modeling, functional dependencies, normalization, relational, hierarchical, network and object oriented data models, relational algebra, relational calculus, data definition and manipulation languages, SQL, recovery, concurrency, security, distribution and integrity of data.

**A515  Telecommunications and Computer Networks (4 cr.)**
P: A505. Fundamental concepts and technologies used in design of computer networks and the Internet. The architecture of the Internet and performance issues. Low-level technologies ranging from Ethernet to wireless will be compared. Packet switching and virtual circuits. Core protocols of the Internet: TCP (Transport Control Protocol) and IP (Internet Protocol). Ongoing and future changes in the Internet.
MS-AM/CS COURSES

A504 - Introductory C++ Programming (2 cr.)
P: Programming Experience. Topics include aspects of C++ that are not object-oriented, basic data structures, standard libraries, and Unix tools for project management. (Does not count as computer science credit for CS majors)

A506 - Object-Oriented Programming in C++ (2 cr.)
C: A504. Topics include objects, classes, encapsulation, inheritance, polymorphism, templates and exceptions. (Does not count as computer science credit for CS majors)

B503 Algorithms Design and Analysis (3 cr.)

B524 Parallel and Distributed Programming (3 cr.)
P: C243, M301. Overview of parallel computers, shared memory, message passing, MIMD and SIMD classifications. Understanding and use of message passing and synchronization facilities such as MPI. Study of parallel programming models such as master-slave, client-server, task-farming, divide-and-conquer and pipelining. Performance analysis of parallel systems, execution time, time complexity, load balancing and scalability. (Credit not given for both B424 and B524)

B536 Advanced Operating Systems (3 cr.)
P: C435. Advanced topics in operating systems, such as: multi-tasking, synchronization mechanisms, distributed system architecture, client-server models, distributed mutual exclusion and concurrency control, agreement protocols, load balancing, failure recovery, fault tolerance, cryptography, multiprocessor operating systems.

B538 Networks and Distributed Computing (3 cr.)

B541 Hardware System Design I (3 cr.)
Structured approach to hardware design, emphasizing hardwired and microprogrammed control. Boolean algebra, hardware building blocks, architecture and control, implementation issues. In the laboratory, students build a working computer using hardware prototyping technologies. Basic training in the use of design and simulation software. Lecture and laboratory. Credit not given for both B541 and C421.

B551 Elements of Artificial Intelligence (3 cr.)

B561 Advanced Database Concepts (3 cr.)
P: C442. Database models and systems: specially relational and object-oriented; relational database design theory; structures for efficient data access; query languages and processing; database applications development; views. Transaction management: concurrency and recovery.
P565 Software Engineering I (3 cr.)
P: C308. Analysis, design and implementation of software systems. Requirements specification: data and process modeling. Software design methodologies. Software quality assurance: testing and verification. Software development processes.

B581 Advanced Computer Graphics (3 cr.)
P: B481. Introduction to graphics hardware and software. Two-dimensional graphics methods, transformations, and interactive methods. Three-dimensional graphics, transformations, viewing geometry, object modeling and interactive manipulation methods. Basic lighting and shading. Video and animation methods. A selection of topics from contemporary computer graphics incorporating and extending the material in C481, such as advanced rendering, procedural modeling, and data visualization.

B582 Image Synthesis (3 cr.)

B651 Natural Language Processing (3 cr.)

B661 Database Theory and Systems Design (3 cr.)

Y790 Graduate Independent Study (1-6 cr.)
Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. R grade not allowed. The different departmental options for independent study are: Research and Reading, Software System Development, Master's Research Project, Master's Software Project, and a University Master's Thesis.
Courses Offered for Graduate Credit In Mathematics
Consult with the department of Mathematical Sciences for the most up-to-date version.

Preparatory Courses

M447-M448 Mathematical Models and Applications I-II (3 - 3)
P: M301 (Applied Linear Algebra);
Formation and study of mathematical models used in the biological, social, and management sciences. Mathematical topics include linear programming, games, graphs, Markov, and Poisson processes, mathematical programming, queues, and equations of growth. Suitable for secondary school teachers.

M471-M472 Numerical Analysis I-II (3 - 3)
P: (for M471) M301 (Linear Algebra), M311 (Calculus III), C201. P: (for M472) M471 and M343 (Intro. to Differential Equations with Applications I);
Numerical solutions of nonlinear equations; interpolation, including finite difference and splines; approximation, using various Hilbert spaces; numerical differentiation and integration; direct methods for linear systems; iterative techniques in matrix algebra. Numerical solutions of nonlinear systems; solution of ordinary differential equations: initial-value problems, boundary-value problems; computation of eigenvalues and eigenvectors; introduction of numerical solutions for partial differential equations.

Advanced Courses

M546 Control Theory (3 cr.)
Examples of control problems; control and observability of discrete and continuous systems; optimal control, the maximum principle; state-space and frequency domain approaches; stochastic control.

M562 Statistical Design of Experiments (3 cr.)
Fundamentals, completely randomized design, randomized complete blocks. Latin squares, multi-classification, factorial, nested factorial, incomplete blocks, fractional replications, confounding, general mixed factorial, split-plot and optimum design. Use of existing statistical computing packages.

M569 Statistical Decision Theory (3 cr.)
Foundation of statistical analysis, Bayesian and decision theoretic formulation of problems; construction of utility functions and quantifications of prior information; methods of Bayesian decision and inference, with applications; empirical Bayes; combination of evidence; game theory and minimax rules, Bayesian design and sequential analysis. Comparison of statistical paradigms.

M571-M572 Analysis of Numerical Methods I,II (3 cr.)
Solution of systems of linear equations, elimination and iterative methods, error analyses, eigenvalue problems; numerical methods for integral equations and ordinary differential equations; finite difference, finite element, and Galerkin methods for partial differential equations; stability of methods.

M5xx Sampling (3 cr.)
Survey designs, simple random, stratified, and systematic samples, systems of sampling, methods of estimation, ratio and regression estimates, costs. Other topics as time permits.

M5xx Transform Methods (3 cr.)
Basic transform methods in problem solving; Laplace transforms,
Fourier transforms, other integral transforms, inversion of transforms; introduction to wavelets and their applications.

**M575 Simulation Modeling (3 cr.)**
Basic simulation modeling, discrete, continuous, and mixed simulation, Monte Carlo simulation.

**M576 Forecasting (3 cr.)**
Forecasting systems, regression models, stochastic forecasting, time series, smoothing approach to prediction, model selection, seasonal adjustment.

**M577 Operations Research (3 cr.)**
Introduction to the methods of operations research. Linear programming, dynamic programming, integer programming, network problems, queuing theory, scheduling.

---

**SCHEDULING OF COURSES**

To help students make long-range curriculum plans, the Department attempts to offer courses in predictable fashion. Courses are offered both in the daytime and in the evenings (5:30 p.m. or later). A course that is offered in the evening in one term will normally be offered during the day in the next term in which it is scheduled, and conversely. If a course has more than one section in a given term, both daytime and evening sections are almost always scheduled. The following tables may be useful in predicting future core course offerings.

### CORE COMPUTER SCIENCE COURSES

<table>

* = multisectioned Fall and Spring, Sp = Spring, Fa = Fall

For elective courses please consult the departmental web site at [www.cs.iusb.edu](http://www.cs.iusb.edu)
Students who have not taken an IUSB mathematics course must take the placement exam before registering for computer science courses, (exception is computer science A106). This exam is designed to help IUSB students determine the level at which they should begin their mathematics studies. Contact the Academic Resource Center for testing.

Students from other IU campuses will be required to take the IUSB math placement exam if they have not satisfied the IUSB prerequisites for a particular course even though they may have met the prerequisites for the course at another IU campus. For example, M014 is the prerequisite for M119 at I.U. Bloomington, but M014 does not fulfill the prerequisite requirements for this course at IUSB. Students having mathematics credits from another college may obtain a placement examination waiver from the Chairman of the Department of Mathematical Sciences, if it can be determined that the transferred credits satisfy the stated IUSB prerequisites for a given course.

The placement exam consists of five parts:

Part A: Arithmetic
Part B: Algebra I
Part C: Algebra II
Part D: Algebra II
Part E: Algebra II and Trigonometry
The test will place you at one of the following levels:

<table>
<thead>
<tr>
<th>Level</th>
<th>Course(s) you are eligible to enroll in</th>
</tr>
</thead>
<tbody>
<tr>
<td>Level I</td>
<td>M004 Introduction to Algebra.</td>
</tr>
<tr>
<td>Level II</td>
<td>M014 Basic Algebra.</td>
</tr>
<tr>
<td>Level III</td>
<td>C101, M107 College Algebra.</td>
</tr>
<tr>
<td>Level IV</td>
<td>M115, M125.</td>
</tr>
<tr>
<td>Level V</td>
<td>M126. Students at this level can move to level VI by completing M126 or M115.</td>
</tr>
<tr>
<td>Level VI</td>
<td>Students at this level have a solid mathematics background and can enroll in M208 or M215.</td>
</tr>
</tbody>
</table>

APPENDIX - B
REMEDIAL MATHEMATICS COURSES

M004 Introduction to Algebra (3cr.)
P: Level I on the mathematics placement examination. Designed for remediation of advanced arithmetic and beginning algebra skills. Arithmetic of fractions and signed numbers. Beginning equations in one variable. S/F grading. Credit may not be used toward a degree.

M014 Basic Algebra (4 cr.)
P: M004, or level II on the mathematics placement examination. Designed to provide algebraic skills needed for future mathematics courses. Algebraic fractions, exponents, linear equations, quadratic equations, inequalities, factoring, elementary graphs. S/F grading. Credit may not be used toward a degree.

NOTE:
Remedial courses are counted when computing a student's credit hour load in any semester, but they do not count toward graduation in any curriculum at Indiana University.
Computer science students who have not taken adequate mathematics courses in high school may need to enroll in the following courses prior to enrolling in Calculus I.

**M107 College Algebra (3 cr.)**
P: M014, or level III on the mathematics placement examination.

**M115 Pre-Calculus and Trigonometry (5 cr.)**
P: M107 or equivalent or level IV on the mathematics placement examination. Designed to prepare students for higher numbered mathematics and computer science courses, including calculus (M208 or M215). Graphing equations in two variables; functions and their graphs; linear, quadratic, polynomial, and rational functions; exponential and logarithmic functions; trigonometric and inverse trigonometric functions. Does not satisfy Arts and Sciences general-education requirements. Equivalent to M125/M126. Credit not given for both M115 and M125/M126.

**M125 Pre-Calculus Mathematics (3 cr.)**
P: M107 or equivalent or level IV on the mathematics placement examination. Designed to prepare students for higher numbered mathematics and computer science courses including calculus (M119). Graphing equations in two variables; functions and their graphs; linear, quadratic, polynomial, and rational functions; exponential and logarithmic functions. Does not satisfy the Arts and Sciences general-education requirements. Credit not given for both M125 and M115.

**M126 Trigonometric Functions (2 cr.)**
P: M125 or equivalent or level V on the mathematics placement examination. Designed to develop the properties of the trigonometric and inverse trigonometric functions and to prepare for a course in calculus (M215). Does not satisfy Art and Sciences general-education requirements. Credit not given for both M126 and M115.
